

KOMFORT Energy Recovery Ventilation System

What does it do?

The KOMFORT ERV is our leading choice of Multi-room ERV's. German designed to simultaneously supply & exhaust air through a built-in heat exchanger.

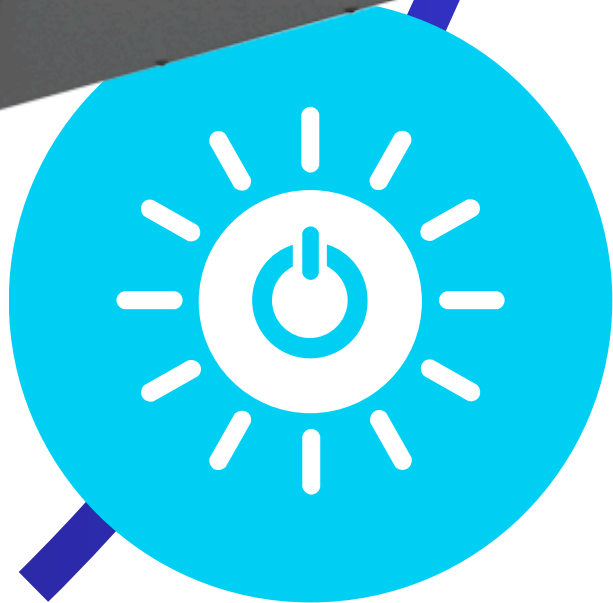

Why is it important?

This system combats mould & dampness in land locked, low airflow & general spaces by supplying fresh filtered air into a space while extracting the stale, musty & contaminated air at the same time.

How does it work?

The KOMFORT ERV when ducted to different areas of a home, will help circulate air throughout an entire home, to provide continuous fresh air flow. Its 3 speed energy & heat recovery reduces the load on existing temperature control units. It has an automated design via wall mounted control panel.

Power Usage

The KOMFORT ERV uses little energy while operating on its required 24/7 operating schedule.

Average Energy Consumption: 3.6kW/ hour
Average Energy Cost: approx. \$1.1/ day
